SOFTWARE DOKOBERO

This is our original program aimed at micro and small companies, thanks to which the user will gain full control over the management of the company! From welcoming new users, through organization structure and permissions, up to the complex module of customer and supplier service - every task becomes easier and more effective. Our tool includes full team administration, absence monitoring, project and task management, as well as time tracking. In addition, we provide central document storage and full records of equipment and company locations.

Everything you need to run a company efficiently and effectively - in one place.

Wybieranie zakresu raportu

Konfigurujemy raporty dla każdego modułu systemu, na wzór obowiązujących w firmie wzorów lub według wzorów zewnętrznych wymaganych m. in. przez organy nadzorcze.

SOFTWARE HERMES

For our client in the transport industry, we have developed dedicated software to support route management and optimization of drivers. The main system allows the creation and management of a database of stations, station types, lines and connections. A key element was the implementation of an algorithm that automatically determines the routes of travel, taking into account the optimal selection of drivers. We made it possible to import drivers' routes from XLSX files and manage their knowledge of routes. In addition, the system generates detailed reports exported to XLSX files, and the extensive administration provides full control over all processes.

To create the software, we used: **.NET Core, JQuery, EPPlus library, SQL Server**

Add-on modules

User management

Generating documents

In-house chat

Notification and reporting system for data anomalies

Virtual data drive

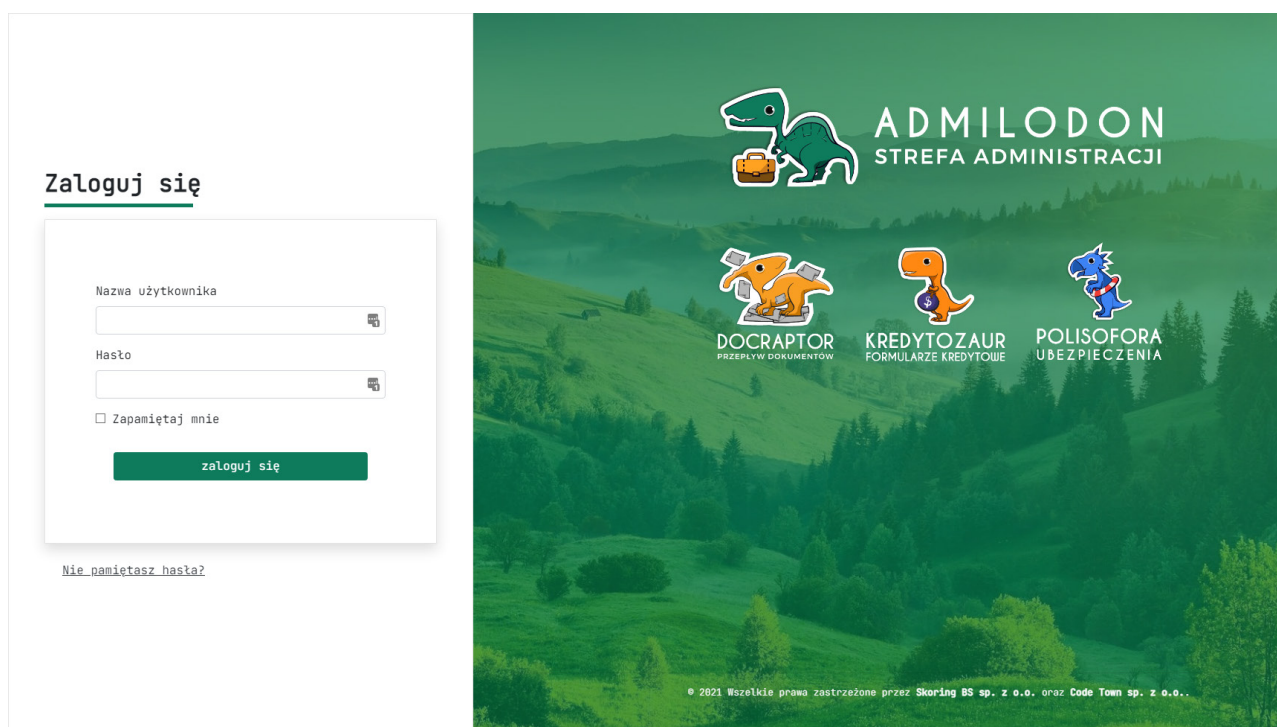

Formularze tworzenia

Rozbudowane listy danych

Zarządzanie

Obsługa zleceń jest zarządzana zarówno z poziomu listy jak i szczegółów pojedynczego zlecenia. Możesz filtrować po pracownikach, statusie zlecenia lub innych istotnych dla Ciebie danych. System również chroni rekordy danych przed edycją przez wiele osób naraz.

SOFTWARE ADMILODON

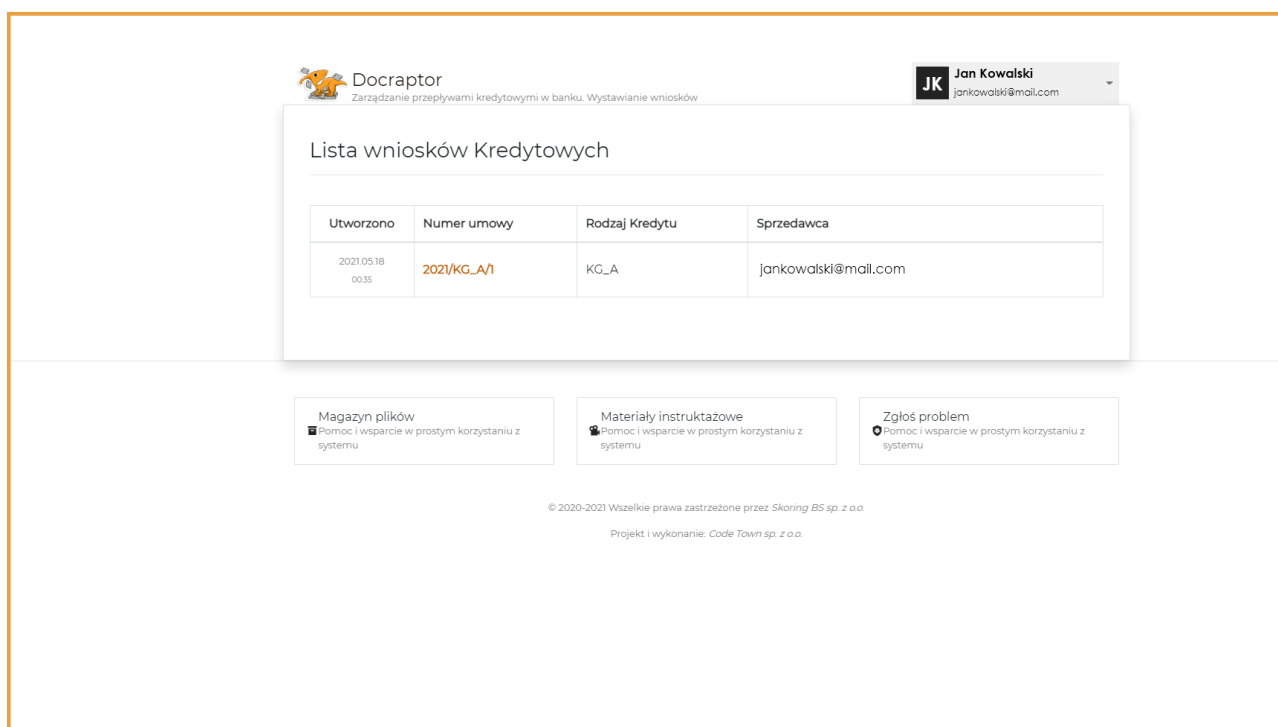

From the company point of view managing a dynamically changing offer, it is important not only to reach the customer, but also to efficiently manage the content, user activity and the entire sales and offer system.

We prepared complete administration of the credit sales department, insurance offer management and monitoring of employees' activities.

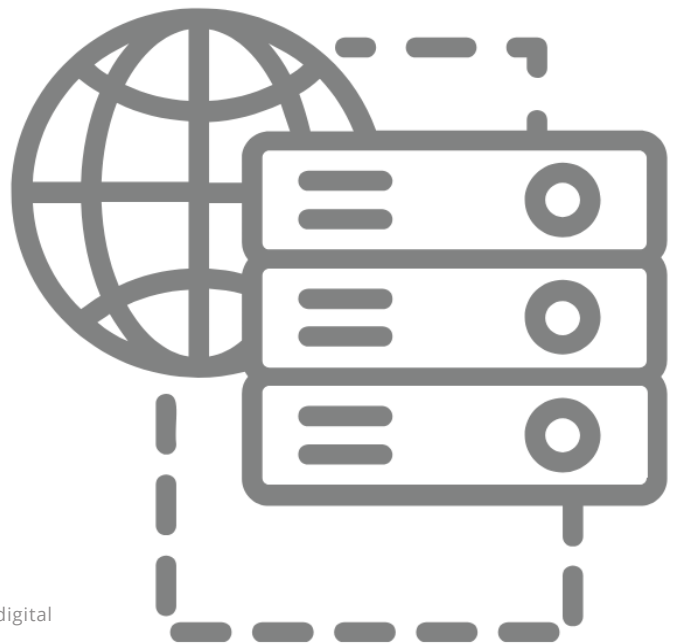

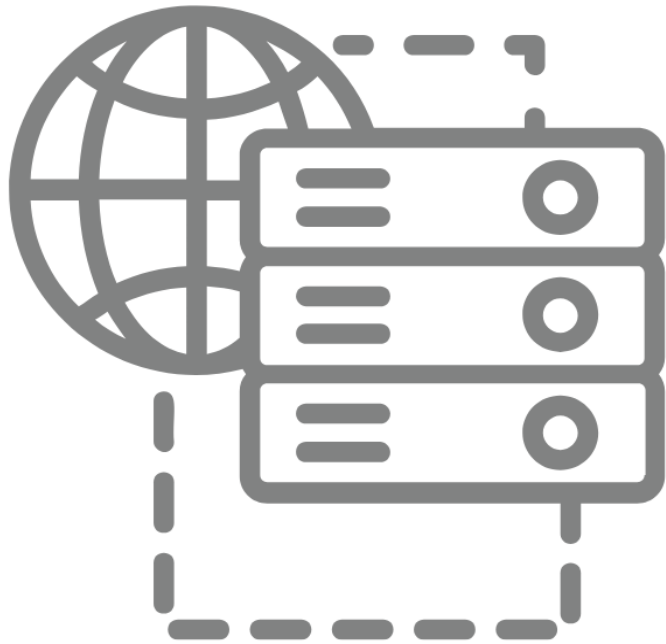

Technology that we used: **.Net Core, MSSQL, RazorPages, SCSS, JS, JQuery, HTML5, Windows Server**

SOFTWARE DOCRAPTOR

The bank is a particularly time-critical institution, and in case of the necessity to serve a large number of applicants, it is necessary to work optimally, eliminating delays and waiting time. Using our solution allowed saving time of manual filling of applications and facilitated archiving of existing applications.

Technology that we used: **.Net Core, MSSQL, RazorPages, SCSS, JS, JQuery, HTML5, Windows Server**

Portals

BarterKey

JEDEN PORTAL WIELE MOŻLIWOŚCI

PORTAL **BARTERKEY**

One of our first projects performed in 2016 was the development of a product exchange portal. The most important element of the system was to develop a process for ordering company offers, with the possibility of negotiating the price before purchase.

We based this project on .net core technology produced by Microsoft. We built the database on Microsoft SQL Server.

LOGO

Barterkey

The Barterkey portal is meant to attract local entrepreneurs and is meant to be a key to their success. Therefore, the current form of the logo has just taken the form of a key. Additionally, red is the only accent color that is strongly associated with the brand. It is an energetic color and it encourages to take the action.

UBEZPIECZENIA DOPASOWANE DO TWOICH POTRZEB

PORTAL UBEZPIECZAJ W BANKU

Clarity and cleanness of design accompanied us throughout the entire process of designing and coding the application for cooperative banks to manage insurance and online sales of these products. We used one group of colors, punctuated with delicate gray, to highlight some elements of the site.

The customer is not only presented with the features of a given insurance, but can also order it by filling in intuitive forms.

Technology that we used: **.Net Core, MSSQL, RazorPages, SCSS, JS, JQuery, HTML5, Windows Server**

PORTAL POLIKREDYT

After a year of operating independent systems, it was decided to merge the two applications into one, for simpler content and customer management, and to be able to link offers between each other without having to switch between different systems.

The idea was to keep the color scheme of each section so that customers could more easily identify the product. Using different color schemes on one portal gave customers a sense of separation and transparency between sections, without affecting the existing functionality and performance.

Technology that we used: **PHP CodeIgniter, JQuery, JS, HTML5, MySQL Nginx Server**

POLISOFORA

Polisofora

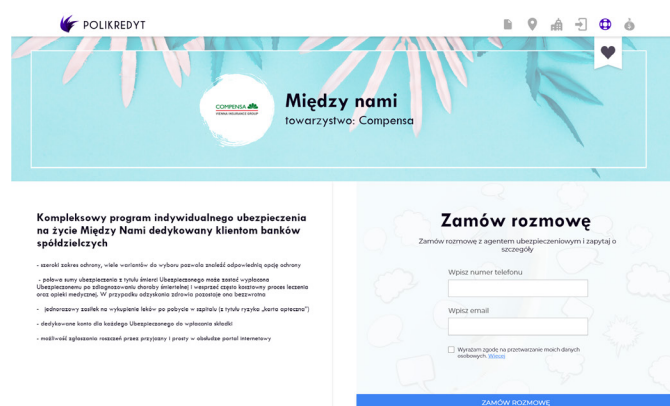

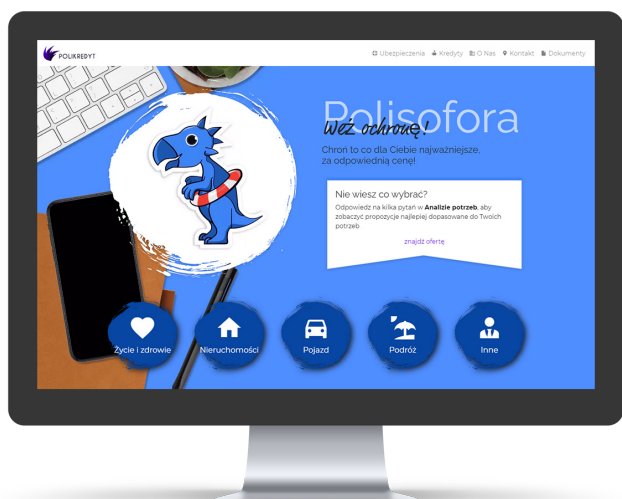

project

website

technology

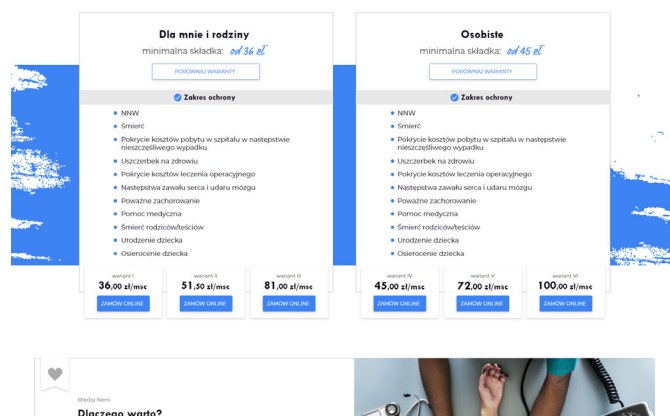

HTML & CSS, Wordpress

When building several brands, building product information pages similarly, using different graphics and colors gives a sense of connection and subconsciously gives the impression of familiarity with the site, even if we know only one brand, another page having information placed in the same areas, actions acting similarly or the same footer, makes it easier for customers to find the site.

HTML & CSS, Wordpress

A website promoting a company and its products is just one example of a website, another example is a web-site built for a specific brand - one client's product. The website advertised a solution that was offered to further customers. This makes presenting the offer much simpler and keep the need to present and send PDF flyers to a minimum. Take care of your products by creating full-fledged marketing pages for them..

Kredytozaur marketing page

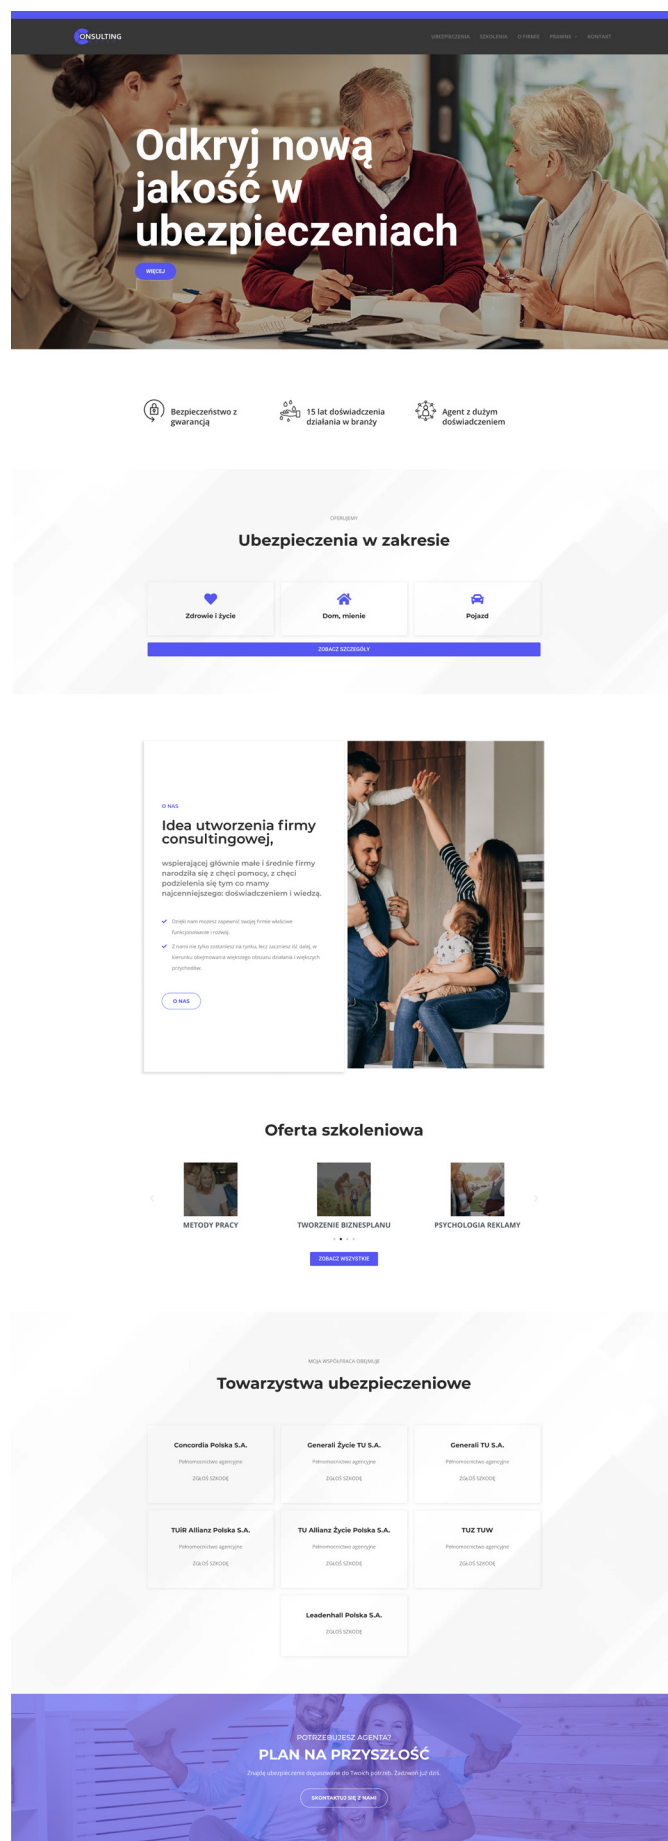

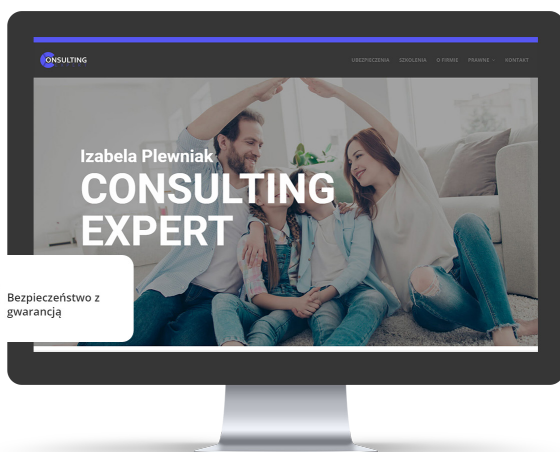

Websites

Consulting Expert

project: marketing website – business card

technology: Wordpress

Making a website for Consulting Expert, the company who sells insurances, was a game changer. With a professional website, the number of customers rises quickly, which led to better incomes and made the company recognizable in the insurance industry. Thanks to that, just a few months of website existence made incredible fast development for the company.

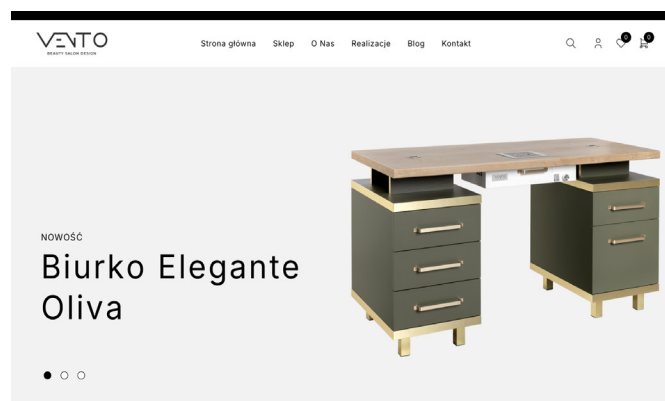

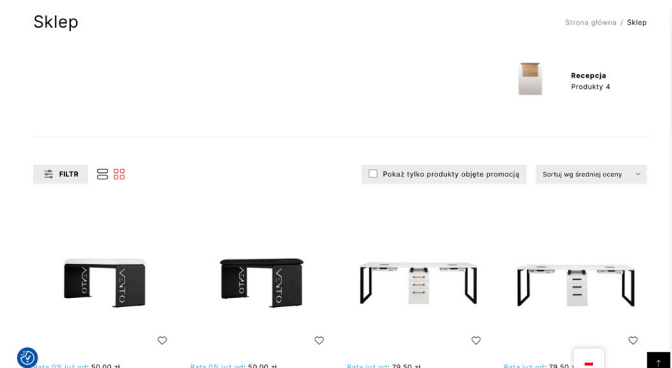

Vento Beauty

project: website – online shop

technology: Wordpress, woocommerce

Beauty industry is growing rapidly, especially in recent years, so we were approached by a client from this industry. We prepared for him a website with an online store, which opened a new level of sales. The store was created on the woocommerce system, which is very intuitive for adding new products, setting up shipping forms, and clearly shows the products available for sale. As a result, 26,000 entries to the store were recorded in a short period of time.

Skoring BS

project: marketing website – business card

technology: HTML & CSS

The company who sells dedicated application for credits asked us to refresh their website and make it suit to current standards. A clear and readable website is fundamental in building company recognition, especially when launching a new product from your range. We enriched the site with colors matching the logo, described the offered products and prepared a mobile design of the site.

SKORING

LOGO

Skoring BS

Logo and brand book made for a Skoring BS company, revolving around Cooperative Banks. Its color scheme has been adjusted to the target clients, with orange as a distinguishing accent. The signet consists of an abstract combination of pie and bar charts, as well as an arrow, symbolizing climbing to the chosen goal.

NMP

project: marketing website – business card

technology: Wordpress

The Internet is no stranger to parishes either, and one of them approached us to improve its existing website. Thanks to our cooperation, the site not only got a new layout, but a redesign was added, it was easier to contact the chancellor thanks to a contact form, and it became much more intuitive for the site administrator to add pastoral announcements and supplement the gallery with new photos. This has made it easier for the faithful to navigate the site and quickly get to a topic of interest on the site.

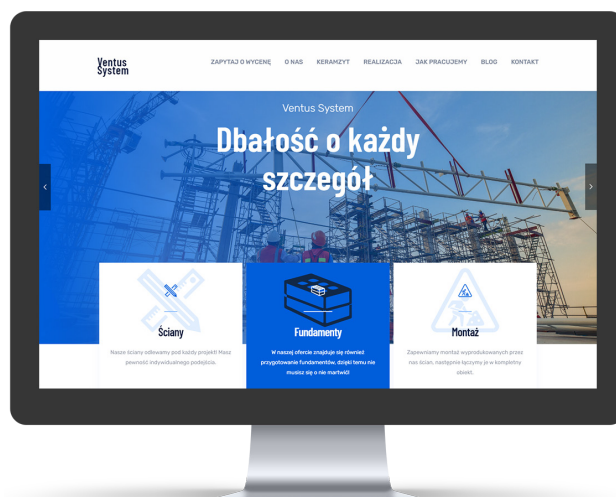

Ventus System

project: marketing website – business card

technology: Wordpress

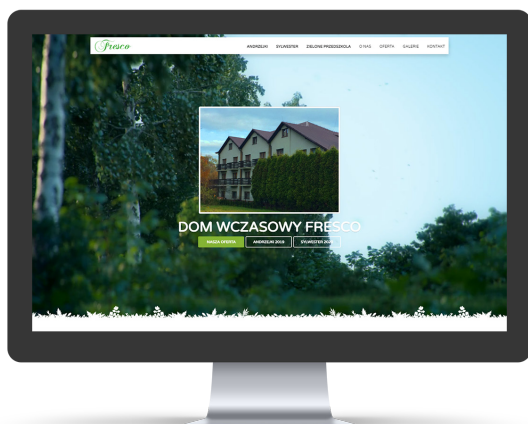

In the case of highly competitive industries, market saturation with companies of similar specialization aren't infrequently causing a problem for clients with finding

a suitable contractor. Customers usually look for offers via the Internet, which significantly increases the need for a website. Our website will not only allow us to gain customers, but also to keep up with the competition. The worst thing that can happen to us is the lack of recognition in our own market.

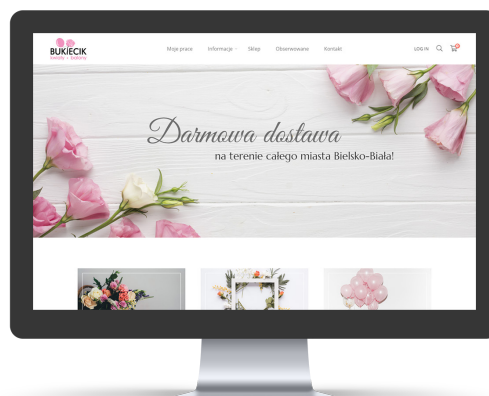

Other websites - selected

Presenting our clients products is extremely important to us. Your success gives us joy and reassures us that what we create is worth our and your time.

CUTTING-EDGE TECHNOLOGY

Virtual walk

Presentation of the cave from the inside is an extraordinary challenge. Not only do you have to overcome the darkness, but also to match the photos, in which sometimes it is impossible to recognize where is the top and where is the bottom. Together with the scientific group RESET ATH we have developed a virtual walk through the cave by using several photos and a map of the area, we could arrange them in such an

order to simulate the actual walk. We added sounds simulating the sounds of bats and dripping water, and the walk itself were supplemented with the measurement of the gyroscope, so that in mobile devices by turning you can actually feel like a traveler, with each movement of the phone discovering a different part of the cave.

ŻÓŁTODZIOBA

SUPPORT OF EDUCATION

Cooperation with WSIZ university

Conducting internships

In collaboration with a local university, we undertook to run student internships and support with academic projects, offering our experience and knowledge so that students are best prepared to enter the job market.

DOBRE PRAKTYKI

1. Kontakt w sprawie praktyk między godziną 8 a 17.
2. Bieżące odpisywanie na wiadomości.
Bieżący raport z postępów nad projektem.
3. Spis godzin uzupełniany codziennie i wysyłany do koordynatora projektu.
4. W sytuacjach niezależnych, zmiany odn planowanego spotkania lub terminu oddania projektu - niezwłoczne powiadomienie koordynatora.
5. Konsultacje następują w umówionym terminie, po skończeniu każdego etapu pracy nad projektem, w razie istotnych pytań można oczywiście pisać ww godzinach.

Skuteczni IT

Internships are not the only project carried out with the University. In 2019 there was a series of technical lectures aimed at students, talking about aspects of working in the industry, touched on such topics as how to talk to customers, working methodologies or new technologies.

Nominations and achievement

GEPARDY BIZNESU 2020

We received special recognition for the projects performed in 2019, becoming a company with very dynamic development and high potential in 2019-2020. We received the nomination based on the analysis of development indicators by independent experts, our company was in the first hundred out of more than a thousand companies in the province with the best indicator of development and potential.

MEMBER OF THE REGIONAL CHAMBER

Building good relationships with other companies is the gateway to success, so we joined the local organization associating companies. We want to support local business and be up-to-date not only with global trends, but also follow the changes in our own backyard. The business community works like the ocean, no matter what size you are, you're sure to find your place somewhere.

Beskidzka Izba
Gospodarcza

FIRST PLACE

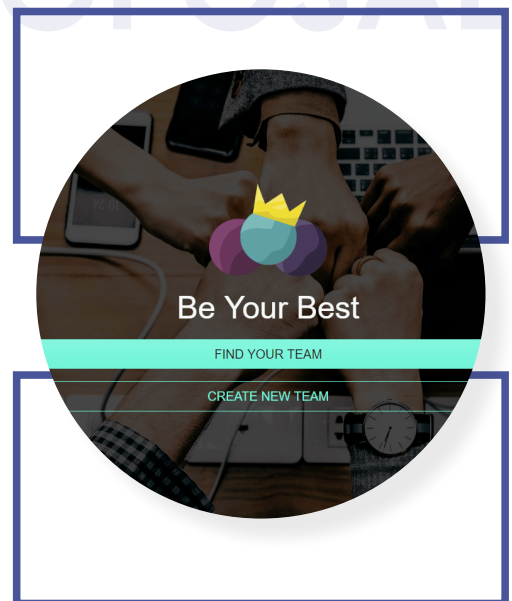

MICROSOFT HACKATHON

Our company came from a small team, knowing each other and working together, even a few years before we started the company together. The core technical founders together participated in several team ventures, one of which was a twenty-four hour programming marathon where they and their team worked on an innovative solution around the clock, ultimately taking first place in the competition.

INTERNSHIP PROPOSAL

CHILLOUT HACKATHON

In spite of running the company, we find time to conduct other extracurricular activities, also being successful. In one of them, we have received the highest award, three internships in one of the largest companies on the Polish market, receiving them for the idea of an innovative tool using neural networks. Our team consisted of only three people! The competition lasted twenty-four hours, a total of over 80 people competed for prizes, divided into about 12 teams.

„Skoring BS

Code Town Company conscientious and timely fulfilled and continues to fulfill its obligations under the signed cooperation agreement. Its actions were characterized by flexibility, professionalism and a comprehensive approach to each of the entrusted tasks.
